Attention:

Before you begin, be certain that the magazine is empty.

It is recommended to wear safety glasses as some parts are under spring tension.

You will need a small punch in order to install this part.

Package contains 2 Green Springs.

1. Use the punch to depress the spring and plunger, allowing the magazine base pad to move.

2. Carefully slide the base pad off the end of the magazine and remove the spring and plunger. Set the stock spring aside. You will not need it again.

3. Insert the new “Green Spring” into the magazine and carefully compress it, one coil at a time, into the body of the magazine. A pencil or similar tool through the middle of the spring can be used to help guide it in.

4. Replace the plunger on the end of the spring, compressing the spring all the way down into the body of the magazine so that the plunger is flush with the end.

5. While holding the plunger in place, slide the base pad back onto the magazine, trapping the plunger and spring inside.
